## 2018 ICPC Southeast USA Regional Contest

## Goat Rope

You have a fence post located at $(\boldsymbol{x}, \boldsymbol{y})$ and a goat. You also have a house, which you model as an axis-aligned rectangle with opposite corners at ( $\mathbf{x 1}, \boldsymbol{y} \mathbf{1}$ ) and ( $\mathbf{x 2}, \boldsymbol{y} \mathbf{2}$ ). You want to give the goat as much room to roam as possible, but you don't want the goat to be able to touch the house. As a guide to how much rope you should buy, determine the minimum distance from the post to your house.

## Input

Each input will consist of a single test case. Note that your program may be run multiple times on different inputs.

Each test case will consist of a single line containing six space-separated integers, all in the same units:
$x y x 1 y 1$ y2 y2
Where $(\boldsymbol{x}, \boldsymbol{y})$ is the location of the post, and ( $\boldsymbol{x} \mathbf{1}, \boldsymbol{y} \mathbf{1}$ ) and ( $\mathbf{x} \mathbf{2}, \boldsymbol{y} \mathbf{2}$ ) are opposite corners of the house. The following are guaranteed:

- All values are between -1,000 and 1,000 inclusive.
- $\mathbf{x 1}<x \mathbf{2}$ and $\mathbf{y 1} \mathbf{1} \mathbf{y 2}$
- The post is not inside the house or on the border.

○ At least one of these is true: $\boldsymbol{x}<\boldsymbol{x} \mathbf{1}$ or $\boldsymbol{x}>\boldsymbol{x} \mathbf{2}$ or $\boldsymbol{y}<\boldsymbol{y} \mathbf{1}$ or $\boldsymbol{y}>\boldsymbol{y} \mathbf{2}$

## Output

Output a single real number, which is the minimum distance from the post to your house (in the same units as the inputs). Output this number rounded to exactly 3 decimal places.

## Sample Input Sample Output

| 7 | 4 | 0 | 0 | 5 | 4 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 6 | 0 | 0 | 2 | 7 | 6 |
| 4 | 8 | 7 | 8 | 9 | 9 |
