## Zigzag

A sequence of integers is said to Zigzag if adjacent elements alternate between strictly increasing and strictly decreasing. Note that the sequence may start by either increasing or decreasing. Given a sequence of integers, determine the length of the longest subsequence that Zigzags. For example, consider this sequence:

$$
12342
$$

There are several Zigzagging subsequences of length 3:
132
142
232
242
342

But there are none of length greater than 3, so the answer is $\mathbf{3}$.

## Input

Each input will consist of a single test case. Note that your program may be run multiple times on different inputs. The first line of input contains an integer $\boldsymbol{n}(\mathbf{1} \leq \boldsymbol{n} \leq \mathbf{1}, \mathbf{0 0 0}, \mathbf{0 0 0})$ which is the number of integers in the list. Each of the following $\boldsymbol{n}$ lines will have an integer $\boldsymbol{k}$ ( $1 \leq k \leq 1,000,000$ )

## Output

Output a single integer, which is the length of the longest Zigzagging subsequence of the input list.

| Sample Input | Sample Output |
| :--- | :--- |
| 5 | 3 |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |
| 2 | 1 |
| 6 |  |
| 1 |  |
| 1 |  |
| 1 |  |
| 1 |  |
| 1 |  |
